

ABSTRACT

The present invention concerns pulverulent mannitol characterized in that it has an average diameter of between 60 and 200 μm , preferably of between 80 and 180 μm , a packed density, determined according to a Test A, of between 0.65 and 0.85 g/ml, preferably of between 0.7 and 0.8 g/ml and a flow factor of at least 60, preferably of between 60 and 90 a process for obtaining and using the said pulverulent mannitol as an excipient in preparations intended in particular for the pharmaceutical field, and especially as a powder for filling hard capsules.
